PROFILE

Physics graduate of Isfahan University of Technology, ranked first in the department for four years, working where **network science**, **statistical physics** and **quantitative biology** meet. I test when network-complexity measures carry information beyond null models, build machine-learning surrogates for spectral properties of graphs, and model metabolic regulation in living systems, with research experience at the **Max Planck School Matter to Life** and **ICTP's Quantitative Life Sciences section**. I am seeking a PhD position in complex systems, network science or biophysics.

Complex networks · Statistical physics · Quantitative biology · Nonlinear dynamics · Graph machine learning · Time-series analysis

19.50 / 20

Cumulative GPA, B.Sc. in Physics

1st

Department rank at IUT, four years running

20 / 20

In six core courses, incl. statistical mechanics

7th

National University Physics Olympiad, 2025

EDUCATION

B.Sc. in Physics Completed

Oct 2022 – 2026

Isfahan University of Technology (IUT), Iran · all coursework and examinations completed; degree certificate being issued

- GPA **19.50 / 20** · Ranked **1st** in the Department of Physics for four years · Full undergraduate scholarship
- Thesis: *Complexity of Real and Model Networks* (supervisor: Prof. Farhad Shahbazi)
- Coursework graded **20 / 20**: Statistical Mechanics, Advanced Statistical Mechanics, Critical Phenomena, Analytical Mechanics, Quantum Mechanics, Computational Physics

Diploma in Mathematics & Physics

Oct 2019 – Jun 2022

National Organization for Development of Exceptional Talents (NODET / Sampad), Isfahan

National Physics Olympiad Training

Jan 2020 – Sep 2021

Young Scholars Club, Tehran · IPhO team-selection training; top 80 nationwide

RESEARCH HIGHLIGHTS

COMPLEX NETWORKS

Complexity beyond the degree sequence

Against degree-preserving null models (10 enzyme networks, 20 centralities), **centrality entropy is largely explained by the degree sequence**; structural descriptors are not.

≈ null

 Centrality-entropy descriptors

≠ null

 Structural descriptors: σ_{corr} , clustering, modularity

B.Sc. thesis · manuscript in preparation [1]

COMPLEX NETWORKS

Small-world structure of enzyme networks

Low-rewiring Watts–Strogatz networks ($p = 0.01$) reproduce the centrality–correlation pattern of real enzyme networks better than Erdős–Rényi or Barabási–Albert models.

● ● ● ● ● ● ● ● ● ●

Enzyme networks where WS matches best

9 / 10

Poster · ICTP Spring College in the Physics of Complex Systems 2026 [3]

GRAPH MACHINE LEARNING

Fast spectral-gap prediction with GNNs

A graph convolutional network on a k -nearest-neighbour “graph of graphs” predicts algebraic connectivity λ_2 from 11 cheap features, trained on 6,000 BA, ER and WS graphs.

6,000 graphs

3 random-graph models

11 input features

Accuracy on held-out graphs

≈ 95%

Manuscript in preparation [2]

QUANTITATIVE BIOLOGY

Metabolic feedback in *C. elegans*

Reversible glycolysis–gluconeogenesis model, informed by fluorescence data, linking FBP, ATP/ADP and NADH/NAD⁺ dynamics to energy balance across sleep–wake states.

Glucose

 $\xrightleftharpoons[\text{FBPase}]{\text{PFK}}$

FBP

 $\xrightleftharpoons[\text{PCK}]{\text{PK}}$

Pyruvate

coupled to ATP/ADP and NADH/NAD⁺

MTL-URO · Max Planck School Matter to Life

RESEARCH TIMELINE

RESEARCH EXPERIENCE

COMPLEX NETWORKS & STATISTICAL PHYSICS

Complexity of Real and Model Networks B.Sc. thesis [1]

Feb 2025 – Present

Supervisor: Prof. Farhad Shahbazi · Isfahan University of Technology · with M. Tabatabaei

- Compared enzyme, metabolic and protein–protein interaction networks with ER, BA and WS models using Laplacian spectra and multi-centrality statistics: **low-rewiring small-world models fit enzyme and metabolic networks best**, while protein interaction networks are significantly more complex.
- Null-model test (10 ENZYMES networks, 20 centralities, configuration-model ensembles, Stouffer and Wilcoxon statistics): **centrality entropy is largely fixed by the degree sequence**, unlike structural descriptors (σ_{corr} , clustering, modularity); next: conditional entropy $S(c | k)$.

Correlations Between Centrality Measures Poster [3]

Nov 2024 – Present

Supervisor: Prof. Farhad Shahbazi · Isfahan University of Technology · with M. Tabatabaei

- Mapped correlations among 11 centralities across ER, BA and WS ensembles and proposed centrality entropy as a complexity indicator; enzyme networks match low-rewiring WS networks ($p = 0.01$) **best in 9 of 10 cases**.

Predicting Algebraic Connectivity with Graph Neural Networks Manuscript [2]

2026

With Yasin Jahangiri · Isfahan University of Technology

- A two-layer graph convolutional network on a k -nearest-neighbour “graph of graphs” (2,000 BA, ER and WS graphs each; 11 cheap features) predicts the Laplacian spectral gap λ_2 with **$\approx 95\%$ accuracy on held-out graphs**.

Time Series as Complex Networks

Jun 2026 – Present

Supervisor: Prof. Farhad Shahbazi · Isfahan University of Technology

- Comparing five time-series-to-network mappings (natural and horizontal visibility, ordinal-partition, quantile, proximity) in one ts2g2 pipeline, starting with AMZN daily closing prices.

QUANTITATIVE BIOLOGY

Modeling Metabolic Dynamics in the Sleep–Wake Cycle of *C. elegans*

Sep 2025 – Feb 2026

Max Planck School Matter to Life (MtL-URO), Dresden, Germany · Supervisors: Dr. Kathrin Laxhuber, Prof. Frank Jülicher

- Nonlinear model of glycolysis–gluconeogenesis (reversible glucose–FBP–pyruvate network via PFK, PK, FBPase, PCK) informed by fluorescence data; coupled FBP, ATP/ADP and NADH/NAD⁺ dynamics probe energy balance across sleep–wake states.

From Single Cell to Population ICTP internship

Mar – May 2026

Quantitative Life Sciences section, ICTP, Trieste, Italy · with Dr. Jacopo Grilli and Giuseppe Giuliani

- How bacterial cell physiology mediates growth trade-offs in fluctuating environments, through mathematical modelling and data analysis; re-derived a recent population-growth model, **identified an error in a key equation** and derived the corrected expression.

PARTICLE PHYSICS, DYNAMICS & OTHER RESEARCH

Double-b Jet Tagging

Jan 2023 – Jun 2025

Supervisor: Dr. Hamed Bakhshian, IUT

- ParticleNet (EdgeConv) on particle clouds to tag boosted double-b jets from $H \rightarrow aa \rightarrow b\bar{b}\mu^+\mu^-$, using jet substructure to improve signal–background separation.

Pursuit Problems in Two Modes

arXiv [4]

Jun 2022 – Sep 2023

With K. Bayati, R. Sharifian, M. M. Eftekhari

- Pursuit on lines and curves, generalized to N pairwise-chasing particles with a new relation; applied to moths circling a lamp.

Health Indicators of IUT Faculty

Paper [5]

Dec 2022 – Feb 2023

Supervisor: Dr. Mohammadreza Batavani, IUT

- Compared pre- and post-COVID-19 physiological health indicators of faculty members.

 HONORS & AWARDS

- 2025

Selected for Mtl-URO · Max Planck School Matter to Life; fully funded, about ten places a year
- 2025

7th place, National University Physics Olympiad · NODET
- 2022–26

Ranked 1st in the Department of Physics · four years, IUT
- 2023

1st place, 3rd IAP Research Tournament · IUST, Tehran
- 2022

Full undergraduate scholarship · IUT
- 2021

Top 80 nationwide, National Physics Olympiad · Young Scholars Club

 TEACHING & MENTORING

- 2024–2026

Teaching Assistant, IUT · Complex Systems (graduate), Quantum Mechanics I & II, Mathematical Physics II, Physics II; problem sessions, computational exercises, mentoring
- 2022–25

Physics Olympiad Instructor · NODET (Sampad), Isfahan
- 2023–now

Student Guide for Incoming Students · IUT

 LEADERSHIP & SERVICE

- 2024–25

Chair, Physics Department Student Association · IUT
- 2024

Organizer, 4th IAP National Tournament · IUT and IUST
- 2024

Team Guide, Kazakhstan delegation · IPHo 2024, Isfahan
- 2022

Head of Physics Instructors · Isfahan Physics Olympiad Club

 SCHOOLS & CERTIFICATES

- 2026

ICTP Spring College in the Physics of Complex Systems · selected participant, Trieste, 16 Feb – 13 Mar; poster [3]
